3421 Hancock St, Second Floor, San Diego, CA 92110 | License: C8-0000098-LIC
 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #85368

Sample **CR+ D8 Cartridge - Wedding Cake CRC220510-11**

Sample ID	SD221020-045 (53827)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Canna River	Received	Oct 20, 2022
Sampled	-	Reported	Oct 24, 2022
Analyses executed	CANX		

Laboratory note: The estimated concentration of the unknown peak in the sample is 10.94% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)-d8-THC or d9-THC. At this time there are no reference standards available for (+)-d8-THC. (+)-d8-THC is a different compound from the main (-)-d8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-d8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-d8-THC and d9-THC with the majority, if not all, of the concentration being (+)-d8-THC. Total d8-THC is estimated to be 69.64%.

 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #85368

Sample **CR + D8 Cartridge - Purple Kush - 1 Gram - CRC220510 - 7**

Sample ID	SD221012-023 (53494)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Canna River	Received	Oct 11, 2022
Sampled	-	Reported	Oct 17, 2022
Analyses executed	CANX		

Laboratory note: The estimated concentration of the unknown peak in the sample is 11.19% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)-8-THC or d9-THC. At this time there are no reference standards available for (+)-8-THC. (+)-8-THC is a different compound from the main (-)-8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-8-THC and d9-THC with the majority, if not all, of the concentration being (+)-8-THC. Total (+/-) D8 Concentration is estimated to be: 78.27%

Results are reported on an "as received" basis, unless indicated otherwise. When a Pass/Fail status is reported, that status is intended to be in accordance with federal, state and local laws which are required for the customer to be in compliance. The measurement of uncertainty is not included in the Pass/Fail evaluation unless explicitly required by federal, state or local laws and has been reported on the certificate of analysis. Measurement of uncertainty is available upon request.

PharmLabs San Diego Certificate of Analysis

3421 Hancock St, Second Floor, San Diego, CA 92110 | License: C8-0000098-LIC
 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #85368

Sample **CR + D8 Cartridge - Green Crack - 1 Gram - CRC220510 -3**

Sample ID	SD221012-019 (53490)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Canna River	Received	Oct 11, 2022
Sampled	-	Reported	Oct 17, 2022
Analyses executed	CANX		

Laboratory note: The estimated concentration of the unknown peak in the sample is 12.69% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)- δ^8 -THC or d9-THC. At this time there are no reference standards available for (+)- δ^8 -THC. (+)- δ^8 -THC is a different compound from the main (-)- δ^8 -THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)- δ^8 -THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)- δ^8 -THC and d9-THC with the majority, if not all, of the concentration being (+)- δ^8 -THC. Total (+/-) D8 Concentration is estimated to be: 80.49%
