 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #85368

Sample **Strawberry Gelato - BURNOUT**

Sample ID	SD230214-144 (61168)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Wherezhemp, LLC		
Sampled	Received Feb 14, 2025	Reported	Feb 15, 2025
Analyses executed	QARUSH, CANX		

Laboratory Note: The estimated concentration of the unknown peak in the sample is 12.79%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 product) from which we believe to be either (+)-THC or d9-THC. At this time there are no reference standards available for (+)-THC. (+)-THC is a different compound from the main (-)-THC cannabinoid and therefore these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-THC and d9-THC with the majority, if not all, of the concentration being (+)-THC. Total (+/-) D8 Concentration is estimated to be: 81.12%

Sample **Jet Fuel - BURNOUT**

Sample ID	SD230214-138 (61162)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Wherezhemp, LLC		
Sampled	-	Received	Feb 14, 2025
Analyses executed	QARUSH, CANX	Reported	Feb 15, 2025

Laboratory Note: The estimated concentration of the unknown peak in the sample is 11.67%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 product) from which we believe to be either (+)-THC or d9-THC. At this time there are no reference standards available for (+)-THC. (+)-THC is a different compound from the main (-)-d8-THC cannabinoid and therefore these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-d8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (-)-d8-THC and d9-THC with the majority, if not all, of the concentration being (+)-d8-THC. Total (+/-) D8 Concentration is estimated to be: 77.95%.
